RE: Technical Bulletin—Implementation of SSN Removal from DoD ID Card Barcodes

---

1. Introduction

As part of the Department's Social Security Number (SSN) reduction activity (i.e., Under Secretary of Defense for Personnel and Readiness Memorandum, "Updated Plan for the Removal of Social Security Numbers (SSNs) from Department of Defense (DoD) Identification (ID) Cards," 5 November 2010), DoD will remove the SSN from barcodes that are printed on the Common Access Card (CAC) and the remaining family of DoD identification cards. DoD completed the initial phases of the transition by removing the SSN printed on the printed surface. The next phase will remove the SSN from the Code 39 and PDF 417 barcodes. The purpose of this document is to describe how the Department will implement these barcode changes.

2. Audience & Scope

DMDC has written this document for the community of users, application developers and system maintainers who interact with the barcodes on DoD ID cards. This document will outline the future format of the Code 39 and PDF417 barcodes on all DoD ID cards (CACs and Teslin).

3. Description of the Change

DMDC considered completely removing the SSN field from the structure of the Code 39 and PDF 417 barcodes and realigning the remaining fields, however, discarded this approach due to the extensive impact that it would have on all applications that read and interpret the individual fields. DMDC decided that the best approach (i.e. least impact) for removing the SSN is to keep the current structure and repurpose the field. The SSN field will become a unique card security identifier that distinguishes each card from any other card issued to an individual. There is currently a randomized single hexadecimal character card instance identifier in the Code 39 barcode, but the identifier is not guaranteed to be unique across all ID cards issued to an individual throughout their association with the DoD. DMDC designed the new format for the SSN field to address this ambiguity. The new field format will allow Physical Access Control Systems (PACS) that keep a history of an individual's enrolled cards, such as the Defense Biometrics Identification System (DBIDS), to more easily distinguish all previously issued cards from the current card.

DMDC's implementation will set the card security identifier's leading three digits to nines to serve as a flag for an invalid SSN number, since the Social Security Administration does not issue valid SSNs that begin with "999". The remaining six digits provide 1,000,000 unique numbers to identify cards issued to each individual. The SSN field in the Code 39 barcode will continue to be encoded as six base-32 characters.

SSN Format: 999-XX-XXXX
Example: 999-55-1212 (base-10) → TP7S7C (base-32)

Applications using the SSN within the barcode should already be aware of the migration to EDIPI (instead of the SSN) as the unique identifier for individuals within the DoD. System maintainers are expected to modify their systems to use the EDIPI instead of the SSN.

Outlined in Appendix A and B are the new barcode formats for CAC/Teslin linear barcodes and CAC 2-diminsional barcodes. To support application testing and development, samples of the changes are provided in Appendix C.

4. Timeframe

DMDC will retain the current structure of the Code 39 and PDF417 barcodes, but begin to use the "SSN" field as a six digit unique identifier with the first three digits set to "999". Maintaining the existing bar code structure is expected to minimize the impact on software applications, system vendors and the bar code using community. These changes will be implemented on newly issued DoD identification cards on **1 December 2012**.

5. Questions and Technical References

Technical details about the barcode implementation that includes these changes can be found within DoD ID Card Bar Code and Software Developer's Kit at https://www.dmdc.osd.mil/appj/docs/01/gBB3iOpJPZtQBxKv/isd/20111214/DoD_ID_BarCodeSDK-Formats_v7_4December2011.pdf.

Specific questions or technical inquiries should be sent to barcodesupport@osd.pentagon.mil.

Appendix A: CAC and Teslin Code 39 Barcode Format

The CAC Code 39 barcode layout contains seven data elements. It follows the existing layout for civilian ID cards as much as possible. Formats and field descriptions are shown in Figure 1 and Table 1, respectively. Instructions for decompressing the Person Designator Identifier and DoD EDI Person Identifier fields are provided in the DoD ID Card Bar Codes & Software Development Kit, version 7.4.0.

Figure 1 CAC Code 39 Barcode Format

VC	Card Security Identifier					PT	DoD EDI Person Identifier							PC	BC	CI
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18

VC = Barcode Version Code
PT =Person Designator Type Code
PC = Personnel Category Code
BC = Branch Code
CI = Card Instance Identifier

Table 1 CAC Code 39 Barcode Detail

Field	Length	Description
Barcode Version Code	1	"1" - Indicates format version and card type for the bar code
Card Security Identifier (CSI)	6	The six-digit CSI, in the range 00-0000 to 99-9999, is prepended with "999' to make a nine-digit number and stored as a six-digit base-32 number in the corresponding range 000000 to TPLIFV.
Person Designator Type Code	1	See Appendix C, DoD ID Card Bar Codes & Software Development Kit, version 7.4.0
DoD EDI Person Identifier (EDIPI)	7	DEERS-assigned numeric identifier (compressed). The ten-digit EDIPI in the range 0000000000 to 9999999999 is stored as a seven-digit base-32 number in the corresponding range 0000000 to 9A0NOVV.
Personnel Category	1	See Appendix C, DoD ID Card Bar Codes & Software Development Kit, version 7.4.0
Branch Code (Service)	1	
Card Instance Identifier	1	A machine-generated random code that is used for security purposes to distinguish a card from other cards that have been issued to a cardholder. Formerly, Security Code.
Total Characters	**18**	

Appendix B: CAC PDF417 Barcode Formats

The current CAC PDF417 barcode layout contains seventeen data elements. The format and brief description of the contents are shown in Table 2. The Person Designator Identifier, DoD EDI Person identifier, and three date fields are compressed. Instructions for decompressing these fields and factors for converting the date fields to common date formats are provided in the DoD ID Card Bar Codes & Software Development Kit, version 7.4.0.

Table 2 CAC PDF417 Barcode

Field	Size	Description
Barcode Version Code	1	"N" - Indicates barcode format version and card type.
Card Security Identifier (CII)	6	The six-digit CSI, in the range 00-0000 to 99-9999, is prepended with "999' to make a nine-digit number and stored as a six-digit base-32 number in the corresponding range 000000 to TPLIFV.
Person Designator Type Code	1	See Appendix C, DoD ID Card Bar Codes & Software Development Kit, version 7.4.0
DoD EDI Person Identifier (EDIPI)	7	DEERS-assigned numeric identifier (compressed). The ten-digit EDIPI in the range 0000000000 to 9999999999 is stored as a seven-digit base 32 number in the corresponding range 0000000 to 9A0NOVV.
Person First Name	20	First name.
Person Middle Initial	n/a	See end of format.
Person Surname	26	Last name.
Date of Birth	4	Number of days from 1 January 1000 (compressed).
Personnel Category Code	1	See Appendix C, DoD ID Card Bar Codes & Software Development Kit, version 7.4.0
Branch Code (Service)	1	
Personnel Entitlement Condition Type	2	
Rank	6	See DODI 1000.13. (TSGT, MAJ, etc.)
Pay Plan Code	2	See Appendix C, DoD ID Card Bar Codes & Software

Pay Plan Grade Code	2	Development Kit, version 7.4.0
Card Issue Date	4	Number of days from 1 January 1000 (compressed).
Card Expiration Date	4	Number of days from 1 January 1000 (compressed).
Card Instance Identifier	1	A machine-generated random code that is used for security purposes to distinguish a card from other cards that have been issued to a cardholder. Formerly, Security Code.
Person Middle Initial	1	
Total Characters	**89**
